Aircon Gas Leak Detector

CR2128
07-09-05

The new Crypton refrigerant leak detector is a low cost effective way of detecting the smallest of refrigerant gases.

The handheld unit detects environmentally damaging gases, including the latest CFC gases . The unit has a two position sensitivity switch allowing the user to locate the smallest leaks.

The CRLD1 has a dual alarm system for leak finding. The increased tic rate sounds and a series of visual indicators illuminate as you approach the source of the leak. This visual indication makes the detection of leaks possible in noisy environments.

The CRLD1 is battery powered and is ideal for use with domestic and commercial refrigeration systems, automotive and air-conditioning systems.

Technical Information

- Detects all existing refrigerants:- HFC, HCFC, CFC, SF6, R134A and R123
- Low or High Sensitivity modes to locate the smallest of leaks.
- Easy to use one handed operation
- Long flexible probe for hard to reach areas
- Audio and visual leak indicators
- Protective rubber sleeve houses probe when not in use
- An extra sensing tip is included.

Part Number

CRLD1 Ionisation Leak Detector
